

DANISH REGIONS

Environmental challenges for regions

Head of office

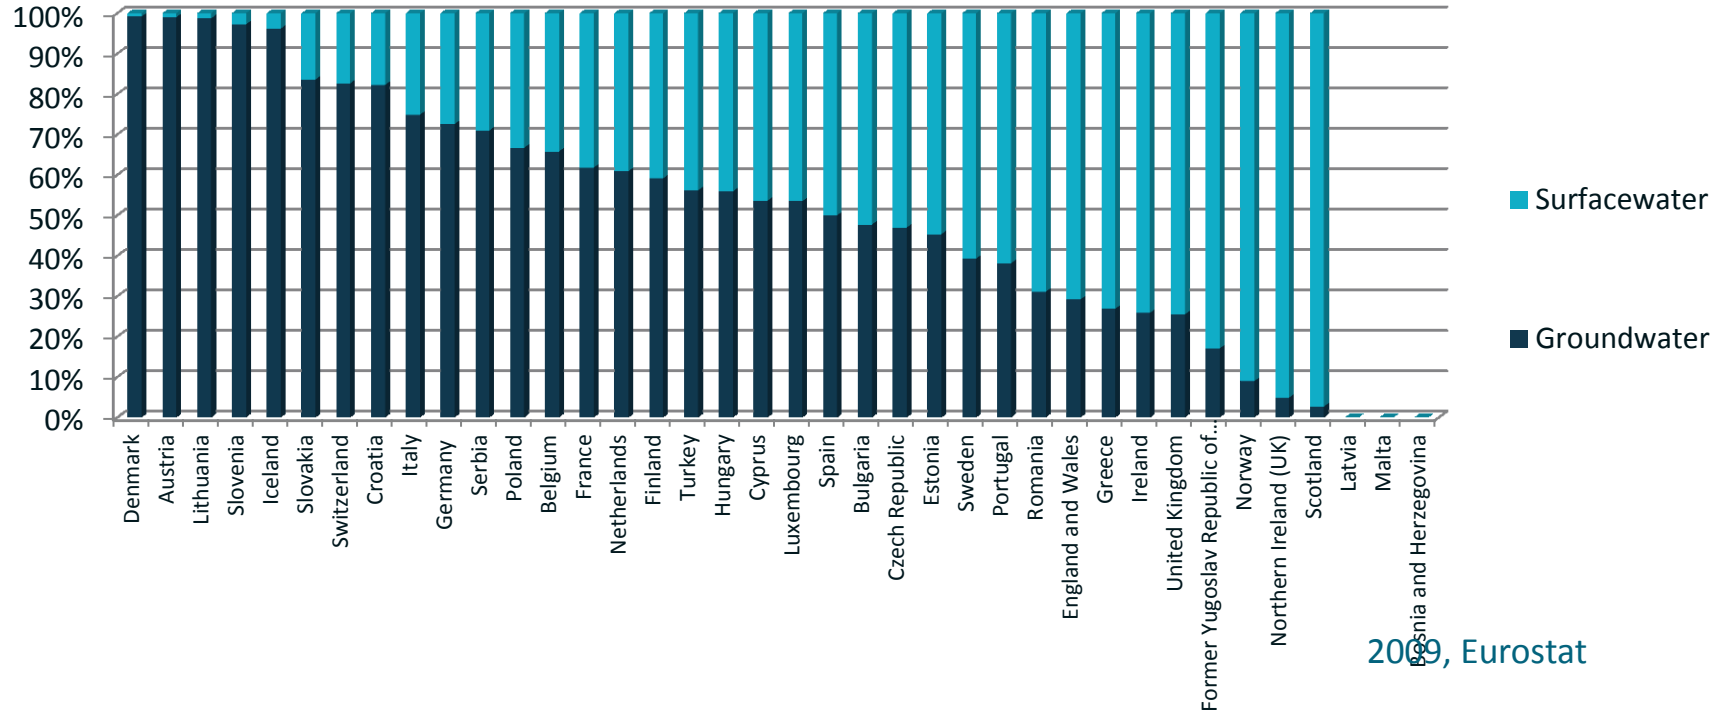

Bente Villumsen

Environment and resources

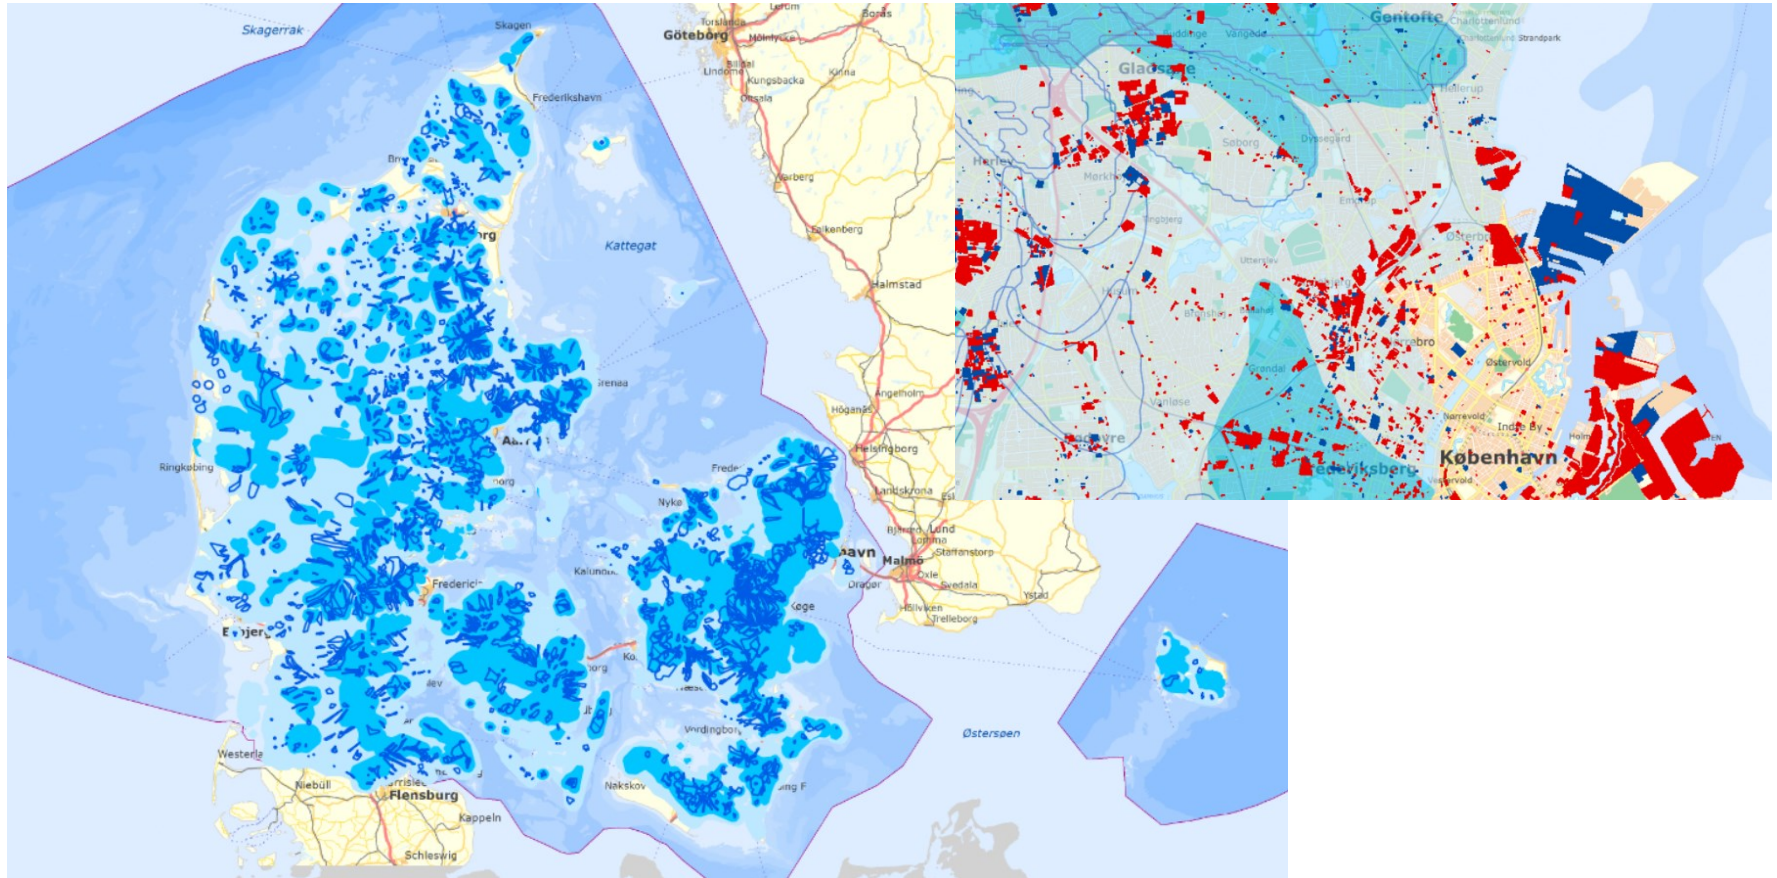

Environmental challenges for regions

- Soil pollution and protection of groundwater
 - Pesticides in groundwater
 - WFD implementation
 - Megasites
- Raw materials – limited resources
- Climate change adaptation

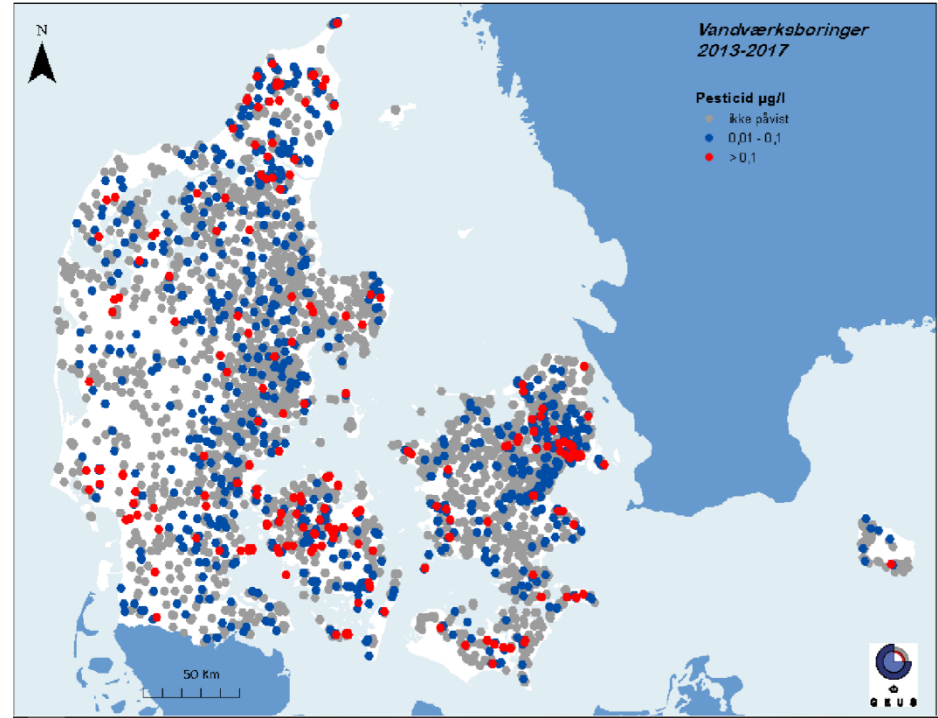

Groundwater is the source of all of our drinking water

Protected drinking water areas

Pesticides in groundwater

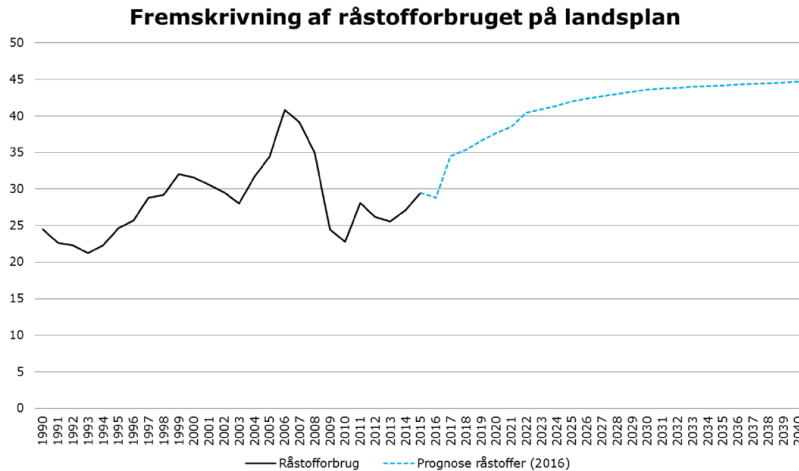

Megasites, and WFD implementation

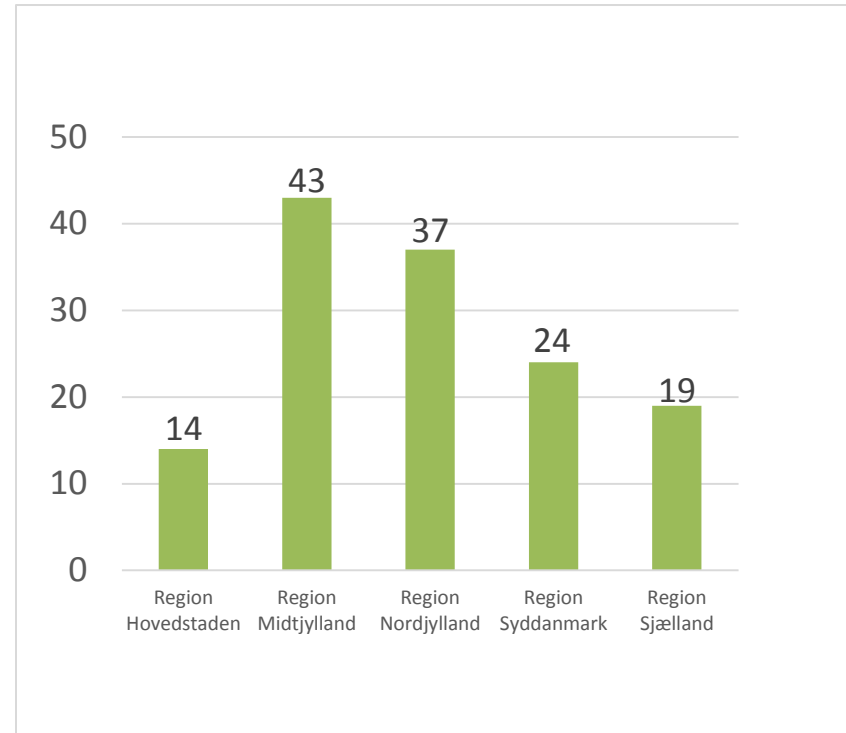

Resources – the challenge of sustainability

Predicted consumption

Resource in present extraction areas, years

Climate change adaptation

- Rising sea level
- Rising groundwater level
- More precipitation
- Heavier rain storms
- Water from all sides
- Municipal responsibility
- Regions can facilitate, support and coordinate
